

## The Latest in Safety and Design

SkyDeck™ and Carl Stahl® have teamed up to provide the newest technology for overhead safety and optics.

# This unique pairing has all the benefits of a SkyDeck™ wire grid system.

By adding Carl Stahl®'s unique X-LED puck to the cross points of SkyDeck™ wires, your grid becomes its own light show. From displaying images as if it were a TV to custom lighting effects, each puck is capable of being individually controlled, resulting in an amazing and captivating experience for your audience.

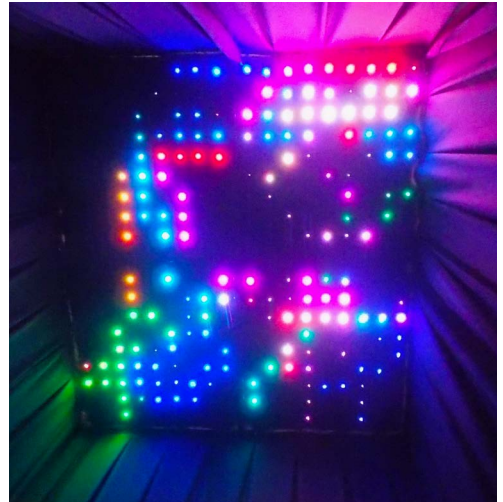

**Carl Stahl® X-LED pucks are designed with foot traffic in mind. Just like SkyDeck™ grids, they are capable of withstanding the rigor of riggers.**

Transform arenas, concerts, and sporting events into an immersive and unforgettable experience.

For dark rides, add effects that will leave guests breathless, and for stages, take technical effects to the next level for a new-age performance.

Auditorium house lights take on a new form and flexibility.

# Do you see the possibilities SkyDots™ brings to your venue?

Take advantage of the benefits of SkyDeck™. Walkable surface allows for safe and efficient overhead access.

Each X-LED puck is individually programmable. This allows for infinite design possibilities.

Transform your venue to match any event. Ceiling comes alive by creating dazzling animations.

Increase revenues by using X-LED for digital signage. Creates new advertising space for potential clients.
